If you are seriously focused on profit, then here is a bull for you. This bull is from the breeding program at the University of Guelph, which has been targeted at Prime Plus with emphasis on feed efficiency and tenderness. This is the first time genetics from the University herd has ever been made available. 395S is a huge curve-bender bull as he ranks in the top 15% for calving ease and birth weight while at the top 2% for yearling gain. This is no surprise as both his sire Mytty In Focus, and maternal grandsire Cherokee Canyon are curvebenders. The maternal great grandsire was HVB Excel who provides added hybrid vigour, milk and growth. Now look at his carcass numbers as they are rare and hard to find - top 30% for rib eye and top 5% for marbling with a 64% lean meat yield, ideal for branded beef programs. Sirius will produce those carcasses that are AAA but yield 1 and do it efficiently and quickly. What makes this bull even more unique are his style and tremendous stride and feet. If you are serious about the beef business, this is a bull you need to use. Call now and order your semen.
